

目次

1. 窒化物半導体への Au フリーオーミック電極の形成と Si 基板上 GaN HEMT への応用に関する研究.....	1
2. 本研究に関連した発表・論文	105
[1] Enhancement of breakdown voltage for fully-vertical GaN-on-Si p-n diode by using strained layer superlattice as drift layer	105
[2] Effect of threading dislocation in an AlN nucleation layer and vertical leakage current in an AlGaIn/GaN high-electron mobility transistor structure on a silicon substrate	109
[3] Improvement of Au-Free, Ti/Al/W Ohmic Contact on AlGaIn/GaN Heterostructure Featuring a Thin-Ti Layer and Low Temperature Annealing	115
[4] Role of thin Ti layer in formation mechanism of low temperature-annealed Ti/Al-based ohmic contact on AlGaIn/GaN heterostructure	120
[5] Dynamic variation of carrier transport properties of recessed Au-free ohmic contacts to InAlN/AlN/GaN on Si-wafer	128
[6] Microstructure variation in thick AlInN films grown on c-plane GaN on sapphire by metalorganic chemical vapor deposition	132
[7] Experimental evidence of the existence of multiple charged states at Al ₂ O ₃ /GaN interfaces	137
[8] Influence of Quantum-Well Number and an AlN Electron Blocking Layer on the Electroluminescence Properties of AlGaIn Deep Ultraviolet Light-Emitting Diodes	144
[9] Hydrogen induced quality improvement of GaNAs layers grown by chemical beam epitaxy	153
本研究関連の表彰	157
教職員名簿	159
